Conventions

In this book, you will find a number of styles of text that distinguish between different kinds of information. Here are some examples of these styles, and an explanation of their meaning.

Code words in text, database table names, folder names, filenames, extensions, pathnames, dummy URLs, user input, and Twitter handle are shown as follows: "We will retrieve the value of a `DataTable` parameter, namely, `LocalParam1`, from the `Action1` local sheet with following code written in the code editor inside `Action1`"

A block of code is set as follows:

```
Dim MyLocalParam  
MyLocalParam = DataTable.Value("LocalParam1", dtLocalSheet)  
Print MyLocalParam
```

New terms and **important words** are shown in bold. Words that you see on the screen, in menus or dialog boxes for example, appear in text like this: "Leave all the fields with the default values and click on **OK**."

Note

Warnings or important notes appear in a box like this.

Tip

Tips and tricks appear like this.
